

# Crate Engine?

"MS109 is the most cost effective performance part you can find."

Royce Bray

12 victories and counting in 2009

## You Need MS109 and the 12-16 Hp That Come With It!

**With 14 victories in 2008, 12 and counting in 2009, Royce Bray knows what it takes to win.** "And MS109 is critical to our success. It burns cleaner, it's more consistent and makes 12 more horsepower than Sunoco GT or any other unleaded fuel. It's the most cost-effective performance part you can find."

**Tom and Shannon Buckingham have two habits they don't choose to break--winning crate engine races and using MS109.** "MS109 gives you more power, better throttle response, and it's much more consistent than pump gas, particularly E85. And clean burning—we race year round and our carburetors look perfectly clean at all times. You won't find a more cost effective performance gain with any hard part. We've won with MS109 for four years now and we're 100% satisfied."

**Shane McDowell, Team Manager for Team Dillon, views MS109 as simply the best fuel for crate engines, period.** "MS109 makes more power and keeps engine temps lower so we don't have overheating issues in even the longest races. It's a key part of our program."

### The best kept secret in crate racing.

VP's Motorsport 109 makes 12-16 more horsepower than pump gas. Pour it in and pick up power. Jet up and pick up more. What could be simpler?
